

Environmental product declaration

in accordance with ISO 14025 and EN 15804+A2

Cooker guard mKomfy Hybrid 25R

The Norwegian EPD Foundation

Owner of the declaration:

CTM Lyng AS

Product

Cooker guard mKomfy Hybrid 25R

Declared unit:

1 pcs

This declaration is based on Product Category Rules:

CEN Standard EN 15804:2012+A2:2019, EN 50693:2019 and PCR EPD Italy 007 serves as core PCR PCR EPD Italy 012 - Electronic and electrical products and

systems - Switches

Program operator:

The Norwegian EPD Foundation

Declaration number:

NEPD-9269-8855

Registration number:

NEPD-9269-8855

Issue date: 03.03.2025

Valid to: 03.03.2030

EPD software:

LCAno EPD generator ID: 349743

General information

Product

Cooker guard mKomfy Hybrid 25R

Program operator:

The Norwegian EPD Foundation
Post Box 5250 Majorstuen, 0303 Oslo, Norway

Phone: +47 977 22 020 web: www.epd-norge.no

Declaration number:

NEPD-9269-8855

This declaration is based on Product Category Rules:

CEN Standard EN 15804:2012+A2:2019, EN 50693:2019 and PCR EPD Italy 007 serves as core PCR

PCR EPD Italy 012 - Electronic and electrical products and systems - Switches

Statement of liability:

The owner of the declaration shall be liable for the underlying information and evidence. EPD Norway shall not be liable with respect to manufacturer information, life cycle assessment data and evidences.

Declared unit:

1 pcs Cooker guard mKomfy Hybrid 25R

Declared unit with option:

A1,A2,A3,A4,A5,B6,C1,C2,C3,C4,D

Functional unit:

1 pc of cooker guard, installed and used to protect a kitchen stove against fire hazards, during a service life of 12 years, including waste treatment at end-of-life.

General information on verification of EPD from EPD tools:

Independent verification of data, other environmental information and the declaration according to ISO 14025:2010, § 8.1.3 and § 8.1.4. Verification of each EPD is made according to EPD-Norway's guidelines for verification and approval requiring that tools are i) integrated into the company's environmental management system, ii) the procedures for use of the EPD tool are approved by EPD-Norway, and iii) the process is reviewed annually by an independent third party verifier. See Appendix G of EPD-Norway's General Programme Instructions for further information on EPD tools

Verification of EPD tool:

Owner of the declaration:

CTM Lyng AS Contact person: Vidar Gangstad Phone: +47 40006023 e-mail: vidar@ctmlyng.no

Manufacturer:

CTM Lyng AS Verkstedveien 19 7125 Vanvikan, Norway

Place of production:

CTM Lyng production site Vanvikan (Norway) Verkstedveien 19 7125 Vanvikan, Norway

Management system:

NS-EN ISO 9001:2015

Organisation no:

936285244

Issue date:

03.03.2025

Valid to:

03.03.2030

Year of study:

2023

Comparability:

EPD of construction products may not be comparable if they not comply with EN 15804 and seen in a building context.

Development and verification of EPD:

The declaration is created using EPD tool lca.tools ver EPD2022.03, developed by LCA.no. The EPD tool is integrated in the company's management system, and has been approved by EPD Norway.

Developer of EPD: Vidar Gangstad - CTM Lyng AS

Reviewer of company-specific input data and EPD: Ståle Sund - CTM Lyng AS

Approved:

Håkon Hauan

Managing Director of EPD-Norway

Independent third party verification of the EPD tool, background data and test-EPD in accordance with EPDNorway's procedures and guidelines for verification and approval of EPD tools. Approval number: NEPDT57.

Third party verifier:

Elisabet Amat, GREENIZE projects

(no signature required)

Product

Product description:

Cooker Guard with wireless sensor for ceiling or hood/extractor

Product specification

mKomfy Hybrid is a cooker guard for ceiling or hood/extractor mounting 70-210 cm over hob.

It has additional safety features and possibility of connecting additional equipment.

The sensor can be used with batteries (3xAA) or external power supply (not included).

Technical data:

Link to the CE Declaration and product data on our website: https://ctmlyng.no/produkter/komfyrvakt-mkomfy-hybrid-25r/

Market:

Norway.

Reference service life, product

12 years. Estimated based on the characteristics of the product and the intended application.

Reference service life, building or construction works

60 years. Standard service life for buildings according to the PCR Part A of EPD Norway.

LCA: Calculation rules

Declared unit:

1 pcs Cooker guard mKomfy Hybrid 25R

Cut-off criteria:

All major raw materials and all the essential energy is included. The production processes for raw materials and energy flows with very small amounts (less than 1%) are not included. These cut-off criteria do not apply for hazardous materials and substances.

Allocation

The allocation is made in accordance with the provisions of EN 15804. Incoming energy and water and waste production in-house is allocated equally among all products through mass allocation. Effects of primary production of recycled materials is allocated to the main product in which the material was used. The recycling process and transportation of the material is allocated to this analysis.

Data quality:

Specific data for the product composition are provided by the manufacturer. The data represent the production of the declared product and were collected for EPD development in the year of study. Background data is based on EPDs according to EN 15804 and different LCA databases. The data quality of the raw materials in A1 is presented in the table below.

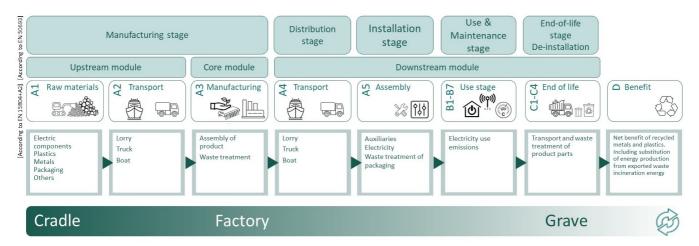

Materials	Source	Data quality	Year
Electronic - Battery alkaline	Olivetti et al. (2011) + ecoinvent 3.6	Scientific literature + database	2019

Additional technical information:

LCA: Scenarios and additional technical information

The following information describe the scenarios in the different modules of the EPD.

Module A4 = In A4, an average transport distance from the production site in Vanvikan to the warehouses we deliver to was included. This transport consist of 14 km by ferry and 516 km by truck. An average distance of 300 km by truck was also added as additional transport to market

Modules A5 = installation is done by manual labour. The use of portable electrical devices such as drills usually have low energy requirements falling under the cut-off criterion of 1% and are therefore neglected (especially for small retail devices). No product scraps are generated during installation, but the end-of-life treatment of packaging is systematically accounted for in this module.

Module B6 = The operational energy use of the switch is calculated based on the methodology provided in the PCR EPD Italy 012 Part B for switches. To calculate the electricity use of the stove guard, the following scenario parameters have been applied:

- Power consumed (Puse) = 2.99 watt
- Reference service life (RSL) = 12 years
- Number of hours in a year = 8760 hours (according to section 4.2.3.5 of the PCR)
- Operating time coefficient (a) = 100 percent (according to section 4.2.3.5 of the PCR)
- Reference current = 100% (according to section 4.2.3.5 of the PCR used to calculate Puse)

In our calculation, we have considered that the product draws current continuously, and therefore, we have used a reference current value of 100% in the calculation (instead of 50%). This represents the total load that the product imposes on the system during constant operation. We include 3 pieces of AA batteries with the product, and have therefore also added the energy they deliver: Capacity 2.6 Ah \times 3 pcs \times Voltage 1.5 V / 1000 = Energy 0.0117 (kWh).

Module C1 = De-installation is done by manual labour. The use of portable electrical devices such as drills usually have low energy requirements falling under the cut-off criterion of 1% and are therefore neglected (especially for small retail devices).

Module C2 = Transport from the installation site to the nearest waste treatment facility is based on an average distance of 300 km.

Modules C3 and C4 = Waste treatment of the product follows the default values provided in EN 50693, Product Category Rules for life cycle assessments of electronic and electrical products and systems, table G.4. This table specified how different types of raw materials used in A1 will likely be treated during the end-of-life of the product. Waste treatments in C3 include material recycling and incineration with energy recovery and fly ash extraction. Disposal in C4 consist of landfilling of different waste fractions and of ashes.

Module D = The recyclability of metals, plastics, and electronic components allows the producers a credit for the net scrap that is produced at the end of a product's life. The benefits from recycling of net scrap are described in formula from EN 15804:2012+A2:2019. Substitution of heat and electricity generated by the incineration with energy recovery of plastic insulation and other parts is also calculated in module D.

Transport from production place to user (A4)	Capacity utilisation (incl. return) %	Distance (km)	Fuel/Energy Consumption	Unit	Value (Liter/tonne)
Truck, 16-32 tonnes, EURO 4 (km) - Europe	36,7 %	300	0,044	l/tkm	13,20
Assembly (A5)	Unit	Value			
Waste, packaging, corrugated board box, to average treatment - A5 including transport (kg)	kg	0,044			
Waste, packaging, plastic film (LDPE), to average treatment - A5 including transport (kg)	kg	0,00076			
Waste, packaging, paper printed, to average treatment - A5 including transport (kg)	kg	0,041			
Operational energy (B6)	Unit	Value			
Electricity, Norway (kWh)	kWh/DU	314,31			
Transport to waste processing (C2)	Capacity utilisation (incl. return) %	Distance (km)	Fuel/Energy Consumption	Unit	Value (Liter/tonne)
Truck, 16-32 tonnes, EURO 5 (km) - Europe	36,7 %	300	0,044	l/tkm	13,20

Waste processing (C3)	Unit	Value	
Waste treatment per kg used electronic plug connector, manual seperation (kg)	kg	0,081	
Waste treatment of plastic mixture, incineration with energy recovery and fly ash extraction (kg)	kg	0,11	
Steel to recycling (kg)	kg	0,011	
Copper to recycling (kg)	kg	0,0074	
Waste treatment per kg used PWB, shredding and separation - C3 (kg)	kg	0,057	
Waste treatment per kg electronics scrap from PWB, with components, recycling of metals C3 (kg)	kg	0,028	
Waste treatment per kg used electronic cable, manual seperation (kg)	kg	0,0070	
Waste treatment of polyethylene (PE), incineration with energy recovery and fly ash extraction (kg)	kg	0,000075	
Acrylonitrile butadiene styrene (ABS) to recycling	kg	0,023	

Disposal (C4)	Unit	Value		
Landfilling of ashes from incineration of Plastic mixture, process per kg ashes and residues (kg)	kg	0,0040		
Landfilling of plastic mixture (kg)	kg	0,11		
Landfilling of steel (kg)	kg	0,0028		
Landfilling of copper (kg)	kg	0,0049		
Landfilling of hazardous waste (kg)	kg	0,098		
Landfilling of ashes from incineration of Polyethylene (PE), process per kg ashes and residues (kg)	kg	0,0000026		

Benefits and loads beyond the system boundaries (D)	Unit	Value		
Substitution of electricity, in Norway (MJ)	MJ	0,17		
Substitution of thermal energy, district heating, in Norway (MJ)	MJ	2,70		
Substitution of primary steel with net scrap (kg)	kg	0,0062		
Substitution of primary copper with net scrap (kg)	kg	0,0036		
Substitution of primary metals with net scrap from PWB, with components (kg)	kg	0,0084		
Substitution of acrylonitrile butadiene styrene, ABS, granulate (kg)	kg	0,023

[&]quot;Reading example: 9,0 E-03 = 9,0*10-3 = 0,009"

^{*}INA Indicator Not Assessed

^{1.} The results of this environmental impact indicator shall be used with care as the uncertainties on these results are high or as there is limited experienced with the indicator

^{2.} This impact category deals mainly with the eventual impact of low dose ionizing radiation on human health of the nuclear fuel cycle. It does not consider effects due to possible nuclear accidents, occupational exposure nor due to radioactive waste disposal in underground facilities. Potential ionizing radiation from the soil, from radon and from some construction materials is also not measured by this indicator.

GWP-IOBC: Global warming potential calculated according to the principle of instantaneous oxidation. In order to increase the transparency of biogenic carbon contribution to climate impact, the indicator GWP-IOBC is required as it declares climate impacts calculated according to the principle of instantaneous oxidation. GWP-IOBC is also referred to as GWP-GHG in context to Swedish public procurement legislation.
