## **HellermannTyton Group Plc**

# **HellermannTyton**

Programme: The International EPD System, <u>www.environdec.com</u>

Programme operator: EPD International AB

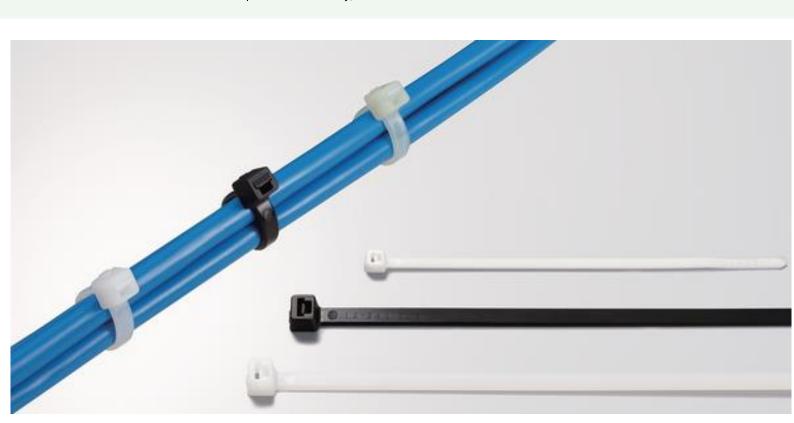

Type of EPD: EPD of multiple products, based on the average results of the product group

EPD registration number: EPD-IES-0025530

 Version date:
 2025-10-08

 Validity date:
 2030-10-08

An EPD may be updated or depublished if conditions change. To find the latest version of the EPD and to confirm its validity, see www.environdec.com

#### **GENERAL INFORMATION**

	Programme Information					
Programme: The International EPD® System						
Address:	EPD International AB Box 210 60 SE-100 31 Stockholm Sweden					
Website:	www.environdec.com					
E-mail:	support@environdec.com					

#### **Product Category Rules (PCR)**

CEN standard EN 15804 serves as the Core Product Category Rules (PCR)

Product Category Rules (PCR): PCR 2019:14 Construction products, version 2.0.1 [valid until 2030/04/07]. The product group classification for the assessed products is UN CPC Code 36990.

PCR review was conducted by: The Technical Committee of the International EPD System. A full list of members is available on www.environdec.com. Review chairs: Rob Rouwette (chair), Noa Meron (co-chair). The review panel may be contacted via e-mail (support@environdec.com).

#### **Third-party Verification**

Independent third-party verification of the declaration and data, according to ISO 14025:2006, via:

#### ☑ Individual EPD verification with a pre-verified LCA/EPD tool

Third-party verifier: Vito D'Incognito, Take Care International

Approved by: International EPD System

Pre-verified LCA tool or Pre-verified EPD tool: HellermannTyton Manchester LCA Tool v1.0 Third-party verifier, accountable for the tool verification: Vito D'Incognito, Take Care International Approved by: International EPD System

Procedure for follow-up of data during EPD validity involves third party verifier:

□ Yes	$\boxtimes$	Νo
-------	-------------	----

The EPD owner has the sole ownership, liability, and responsibility for the EPD.

EPDs within the same product category but published in different EPD programmes, may not be comparable. For two EPDs to be comparable, they shall be based on the same PCR (including the same first-digit version number) or be based on fully aligned PCRs or versions of PCRs; cover products with identical functions, technical performances and use (e.g. identical declared/functional units); have identical scope in terms of included life-cycle stages (unless the excluded life-cycle stage is demonstrated to be insignificant); apply identical impact assessment methods (including the same version of characterisation factors); and be valid at the time of comparison. For further information about comparability, see EN 15804 and ISO 14025.

#### INFORMATION ABOUT EPD OWNER

Owner of the EPD:

HellermannTyton Group Plc

Address:

Griffin House 135 High Street, Crawley, West Sussex. RH10 1DQ

Contact:

salihujarmajo.ahmed@hellermanntyton.com

Address and contact information of the LCA practitioner:

Griffin House 135 High Street, Crawley, West Sussex. RH10 1DQ. <a href="https://www.hellermanntyton.co.uk">www.hellermanntyton.co.uk</a> Dr. Salihu Jarmajo Ahmed, HellermannTyton Group Plc.

Description of the organisation:

HellermannTyton is a leading manufacturer and supplier of quality products for fastening, fixing, installing, connecting, insulating, protecting and identifying electrical cables and network connectivity solutions.

Product-related or management system-related certifications:

ISO50001, ISO45001, ISO9001, AS9100, IATF16949

#### PRODUCT INFORMATION

#### Products names:

- T50I-PA66-NA inside serrated,
- T50L-PA66-NA inside serrated,
- T50ROS-PA66HS-BK outside serrated.

#### Product identification:

Part number (UNS)	Part name	Part colour	Part dimensions & Visual representation	Part weight
111-05219	T50I-PA66	Natural (NA)	300.0x4.6mm, Ø1.5-85.0mm	0.00191 kg
111-05409	T50L-PA66	Natural (NA))	390x4.6mm, Ø1.5-110.0mm	0.00246 kg
118-05004	T50ROS-PA66HS	Black (BK)	360x4.6mm, Ø1.5-50.0mm	0.00127 kg

UN CPC code:

36990

#### Product description:

Manufactured from high-quality polyamide 6.6 (PA66) for durability and resistance to environmental factors, the T50 cable ties series are designed for bundling and securing cables, pipes, hoses, and other elements in a wide range of applications. These cable ties are designed to provide a reliable fastening solution, ensuring organized and safe routing of components in electrical installations, machinery, vehicles, and various industrial settings. The T50-Series offers in-between sizes compared to our LK-Series range, allowing for precise fitting to individual customer needs.

#### **Technical Performance**

- Material: Polyamide 6.6 (PA66), high-impact modified, halogen-free.
- Locking mechanism: Inside (111-05219, 111-05409) and outside (118-05004) serrated strap, plastic pawl, positive locking, low insertion force.
- Tensile strength: 225N.
- Flammability: UL 94 V2 compliant.
- Application range: Multiple sizes, easy installation, permanent (non-releasable).

#### Name and location of production site:

HellermannTyton Manchester, UK 1 Sharston Green Business Park Robeson Way, Sharston, Manchester, UK M22 4TY

#### CONTENT DECLARATION

The mass (weight) of one unit of a product, as purchased or per declared unit:

1 kg of cable ties, with packaging

#### Content of the product in the form of a list of materials and substances, and their mass:

This EPD encompasses several products from the T50-Series. The content declaration reflects the average material composition across all included products, with each product's contribution weighted according to its production volume. This approach ensures the declared values represent the typical material makeup for the entire group.

Product content	%, Content	Post-co recycled materia % of pro	d Biogenic material, mail, mass-			material, kg C/product or declared unit
Polyamide 6.6	99.0%	0%		0%		0
Polyamide 6.6 Masterbatch	1.0%	0%		0%		0
TOTAL	100%		0%		0%	0
Packaging materials		Mass, kg	Mass-	Mass-% (versus the product)		ogenic material, kg C/ declared unit
Cardboard		0.068		6.8%		0.0337
LDPE		0.033		3.3%		0
Wooden pallet		0.005		0.5%		0.0025
TOTAL		0.106		10.6%		0.0362

The low biogenic carbon content in the average result arises because the cable ties themselves contain no biogenic carbon; only a small proportion of about 4% comes from the packaging materials (cardboard and wooden pallets). This minimal biogenic carbon content has been included in the EPD calculations, resulting in low reported values for biogenic carbon overall.

The T50-series cable ties do not contain any substances that can be included in "Candidate List of Substances of Very High Concern for Authorization" and raw materials used are not part of the EU REACH regulation.

#### LCA INFORMATION

#### **Declared unit:**

1kg of cable ties, with packaging

#### Reference service life:

Not applicable

#### <u>Time representativeness:</u>

The collection of foreground data refers to the year 2023. Site specific data was used for the 1-year average process data, for reference year 2023. For background data the time frame was no more than four years old with a reference year of 2020-2023.

#### Geographical scope:

US, Europe and UK (Modules A1-A3), Europe (Modules A5, C1-C4, D)

#### Database(s) and LCA software used:

The LCA model, data aggregation, and calculation of environmental impacts were performed using the Sphera LCA for Experts (LCA FE) software, version 10.7. The background data was sourced from the Sphera Managed LCA Content (MLC) 2025.1 database.

#### **Description of system boundaries:**

Cradle to gate with optional modules (A1-A3 + A5 + C + D). The additional module included within this EPD is A5. Module A4 (transport to site) and B1-B7 (use stage) are excluded from this EPD. A4 is omitted due to variable, project-specific transport scenarios, while B modules are excluded as the product has no use-phase impacts. This aligns with EN 15804 and sectoral EPD guidance.

<u>Reference package used:</u> As specified in EN 15804:2012+A2:2019 and the PCR 2019:14 v2.0.1, the environmental impacts are declared and reported using the baseline characterisation factors from the EC-JRC using EN 15804 reference package based on EF 3.1.

#### Module A1 to A3:

The product stage includes provision of all materials, products and energy, as well as waste processing up to the end-of waste state or disposal of final residues during the product stage

These modules consider the manufacturing of raw materials (module A1).

The raw materials undergo transport to the production site in Manchester, UK via a diesel driven truck, and a heavy fuel oil powered cargo ship (module A2). From there they are processed to produce the cable tie.

The provision and use of electrical energy sources, water consumption, production waste are considered, along with the impact of packaging (module A3).

The process for the manufacture of cable ties starts by feeding polymer granules into the hopper of an injection moulding machine. The granules are then heated and melted in the machine's barrel, to turn them into a viscous liquid ready for injection. Once the polymer reaches the correct temperature, it's injected under high pressure into the precisely designed mould that forms the cable tie. After the molten

polymer fills the mould cavity, it is allowed to cool and solidify. Once the plastic is solidified, the mould opens, and the cable tie is ejected, the ties are then inspected for quality control and packed on site ready for sale.

Hellermanntyton has committed to sourcing 100% renewable electricity, backed by Guarantees of Origin (GO) certificates, for the full validity period of this EPD. Accordingly, the electricity used at the Manchester, United Kingdom manufacturing facility is supplied from wind energy and powers the entire site, with an emission factor of 0.0329 kgCO<sub>2</sub>eq/kWh.

#### Module A5:

Treatment and disposal of packaging material. Benefits for potential avoided burdens due to energy substitution of electricity and thermal energy generation are declared in module D.

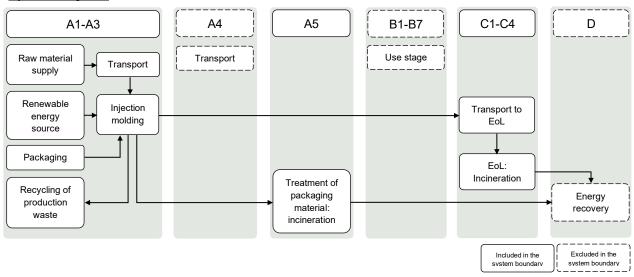

#### Module C1-C4:

- Deconstruction and Demolition (C1): C1 is not applicable to this type of product, as it is not a product which requires any dismantling and so is declared within the results as zero.
- Transport (C2): 130km via a EURO 5 Truck (EU scenario) as per section 4.8.4 in PCR 2019:14 v2.0.1
- Waste Processing (C3): Incineration with energy recovery. Benefits for potential avoided burdens due to energy substitution of electricity and thermal energy generation are declared in module D.

#### Module D:

Benefits and loads from modules A5 and C3.

#### System diagram:

#### Cut-off criteria and exclusions:

In the assessment, all available data from production process are considered, i.e., all raw materials used, utilised thermal energy, and electric power consumption using best available LCI datasets. Thus, material and energy flows contributing less than 1% of mass or energy are considered. The sum of the excluded material flows does not exceed 5% of mass, energy, or environmental relevance.

- The packaging of the pre-products / raw materials from the suppliers and its disposal at the production site is not considered in the scope of this study.
- Production of capital equipment, facilities and infrastructure required for manufacture are outside the scope of this assessment.

#### Data quality and sources

Data quality is compliant with ISO 14025:2006. All primary data were collected for the year 2023. All background data comes from the Sphera MLC 2025.1 database.

#### Data quality statement

The data quality assessment (DQA) was conducted in accordance with EN 15941:2024 and follows the requirements of Annex E in EN 15804. All data sets contributing to at least 80% of the results for each core environmental impact indicator have been individually assessed for:

- Time-related representativeness: Data reflect the most recent and relevant production period.
- Geographical representativeness: Data are specific to the region of production.
- Technological representativeness: Data correspond to the actual technology and processes used.
- Completeness and consistency: All relevant flows and processes are included, and data are consistent across the system boundary.

The assessment confirms that the majority of the environmental impacts are based on high-quality, specific data. The DQA summary is available in the project report. Any data gaps or use of proxy data are transparently documented and their influence on the results is considered minimal. No fair, poor or very poor data was found during the assessment of relevant data using EN 15804:2012+A2:2019, Annex E, Table E.2.

#### **Allocation Procedures**

#### Background Data:

Information about allocation procedure of single datasets is documented in:

https://lcadatabase.sphera.com/

#### Foreground Data:

No allocation was used as there was only one product produced within this production system. In accordance with the PCR Construction products section 4.5.1 to avoid allocation taking place, the production plant was divided into subunits specific to any of the T50-series cable ties being produced, and LCI data was collected for each subunit. This data has been calculated and scaled based on the annual production mass of the T50-series cable ties (total tonnes) for the year 2023. No co-products were produced alongside any of the T50-series cable tie, and so all production burdens are assigned to the main cable tie product.

#### Waste Materials:

Most of the production waste is sent to a recycling facility. The cut-off method based on the Polluter Pay Principle (PPP) has been applied, and, under a conservative allocation approach, all recycling burdens are assigned to the cable tie. The waste stream itself is not assessed or accounted for within this EPD analysis. For the End of Life of the packaging and product, when incineration with energy recovery is the chosen waste disposal method, benefits for potential avoided burdens due to energy substitution of electricity and thermal energy generation are declared in module D.

Modules declared, geographical scope, share of specific data (in GWP-GHG results) and data variation (in GWP-GHG results):

		duct st		prod	ruction			Us	se sta	ge			Er	End of life stage			Resource recovery stage	У
	Raw material supply	Transport	Manufacturing	Transport	Construction installation	Use	Maintenance	Repair	Replacement	Refurbishment	Operational energy use	Operational water use	De-construction demolition	Transport	Waste processing	Disposal	Reuse-Recovery-Recycling-	
Module	<b>A</b> 1	A2	А3	A4	A5	В1	B2	В3	В4	В5	В6	В7	C1	C2	С3	C4	D	
Modules declared	Х	Х	Х	ND	Х	ND	ND	ND	ND	ND	ND	ND	Х	Х	Х	Х	Х	
Geography	US, EU	US, EU	GB	-	E	-	ı	ı	ı	-	-	ı	EU	EU	EU	EU	EU	
Specific data used In GWP- GHG		2.72%				-	1	1	,	-	-	1	1	-	1	ı	-	
Variation – products In GWP- GHG		±9.3%				1	-	-	-	-	-	-	-	-	-	-	_	
Variation – sites		0%				-	-	-	-	-	-	-	-	-	-	-	-	

X = Declared, ND = Not Declared

Declaration of data sources, reference years, data categories, and average share of primary data:

Product components	Source Type	Source	Reference Year	Data Category	Share of primary data, of GWP-GHG results for A1-A3
Manufacturing of product	Collected data	LCA FE 2025.1	2023	Primary data	1.78%
Transport to manufacturing site	Collected data	LCA FE 2025.1	2023	Primary data	0.94%
Production of plastic granules	Database	LCA FE 2025.1	2024	Representative secondary data	0%
Tot	tal share of prin	nary data, of GW	P-GHG results fo	or A1-A3	2.72%

The share of primary data is calculated based on GWP-GHG results. It is a simplified indicator for data quality that supports the use of more primary data, to increase the representativeness of and comparability between EPDs. Note that the indicator does not capture all relevant aspects of data quality and is not comparable across product categories.

#### Explanation of deviations from ±10% threshold

his EPD covers multiple T50-series sizes, with all variants' impacts falling within ±10% of the declared average, as required by GPI 5.0.1 and ISO 21930. Results range from +7.0% to -9.3% of the average, confirming representativeness and compliance with current standards.

#### **ENVIRONMENTAL PERFORMANCE**

# LCA results of the products - main environmental performance results

<sup>\*</sup> Disclaimer: The estimated impact results are only relative statements, which do not indicate the endpoints of the impact categories, exceeding threshold values, safety margins and/or risks. The results of the end-of-life stage (modules C1-C4) should be considered when using the results of the product stage (modules A1-A3).

All the incorporated T50-series products have environmental indicator results ranging from +7.0% to -9.3% of the average, comfortably within the accepted  $\pm10\%$  variation. This consistency confirms that the average EPD results accurately represent the group and meet current standards.

GWP-biogenic	Global Warming Potential from biogenic sources (kg CO <sub>2</sub> eq.)
GWP-luluc	Global Warming Potential from land use and land use change (kg CO <sub>2</sub> eq.)
GWP-total	Total Global Warming Potential (kg CO <sub>2</sub> eq.)
GWP-GHG	Global Warming Potential for greenhouse gases (kg CO <sub>2</sub> eq.)
ODP	Ozone Depletion Potential (kg CFC-11 eq.)
AP	Acidification Potential (mol H <sup>+</sup> eq.)
EP	Eutrophication Potential
EP-freshwater	Freshwater eutrophication potential (kg P eq.)
EP-marine	Marine eutrophication potential (kg N eq.)
EP-terrestrial	Terrestrial eutrophication potential (mol N eq.)
POCP	Photochemical Ozone Creation Potential (kg NMVOC eq.)
ADP	Abiotic Depletion Potential
ADP-minerals&metals	Abiotic depletion potential for non-fossil resources (kg Sb eq.)
ADP-fossil	Abiotic depletion potential for fossil resources (MJ)
WDP	Water Deprivation Potential (m³)
Resource Use Indicator	S
PERE	Use of renewable primary energy excluding renewable primary energy resources used as raw materials (MJ)
PERM	Use of renewable primary energy resources used as raw materials (MJ)
PERT	Total use of renewable primary energy resources (MJ)
PENRE	Use of non-renewable primary energy excluding non-renewable primary energy resources used as raw materials (MJ)
PENRM	Use of non-renewable primary energy resources used as raw materials (MJ)
PENRT	Total use of non-renewable primary energy resources (MJ)
SM	Use of secondary material (kg)
RSF	Use of renewable secondary fuels (MJ)
NRSF	Use of non-renewable secondary fuels (MJ)
FW	Use of net fresh water (m³)
	Ose of the filesti water (III )
Waste Indicators	Hazardous Wests (disposed) (kg)
HW	Hazardous Waste (disposed) (kg)
NHW	Non-Hazardous Waste (disposed) (kg)
RW	Radioactive Waste (disposed) (kg)
Output Flow Indicators	
CFR	Components for Reuse (kg)
MR	Material for Recycling (kg)

MER	Materials for Energy Recovery (kg)
EEE	Exported Energy, Electricity (MJ)
EET	Exported Energy, Thermal (MJ)
Lifecycle Stages /	, , ,
A1	Raw material supply
A2	Transport
A3	Manufacturing
A4	Transport to site
A5	Construction/Installation
B1	Use
B2	Maintenance
B3	Repair
B4	Replacement
B5	Refurbishment
B6	Operational energy use
B7	Operational water use
C1	Deconstruction/Demolition
C2	Transport to waste processing
C3	Waste processing
C4	Disposal
D	Reuse-Recovery-Recycling potential
Other Relevant Te	rms
SVHC	Substances of Very High Concern
EC No.	European Community Number
CAS No.	Chemical Abstracts Service Number
MJ	Megajoule
kg	Kilogram
m³	Cubic Meter
NMVOC	Non-Methane Volatile Organic Compounds
Sb eq.	Antimony Equivalents
P eq.	Phosphorus Equivalents
N eq.	Nitrogen Equivalents
CFC-11 eq.	Chlorofluorocarbon-11 Equivalents
CO <sub>2</sub> eq.	Carbon Dioxide Equivalents
kg C	Kilograms of Carbon
kg CO <sub>2</sub> eq.	Kilograms of Carbon Dioxide Equivalent
ND	Not Declared
IATF	International Automotive Task Force
AS	Aerospace Standard
UN CPC	UN Central Product Classification
PA66	Polyamide 6.6 (Nylon 6.6)
PA66HS	Polyamide 6.6 (Nylon 6.6) Heat stabilised
EoL	End of Life
