## pucks

### Description

*Smart DIN mounting for Plejd*

Pucks is a compact mounting bracket that installs Plejd units on their short side, freeing up up to 60% more space in the electrical distribution board. It works with or without Battery Backup – the rear section can easily be removed when a Battery Backup is used. The back side also features an integrated holder for Wago connectors, making it easy to bridge conductors. Pucks accommodates four 2-pole, four 3-pole, or two 5-pole Wago connectors – or a combination thereof.
