## capps

### Description

Protection and termination for cable protection conduits

Do you want to conceal or protect cable protection conduits that run up along the façade from soil, gravel, and water? Then Capps is the perfect solution.

The product is designed to provide a clean, professional finish while allowing easy connection of the cable protection conduit directly to the tapered section. Ideal when continuing with installations such as EV chargers, solar panels, facade lighting, or other electrical applications.

The top section can easily be cut along the marked line using a hacksaw or angle grinder. Remove any sharp edges with a file afterwards to ensure a safe installation.

Compatible with most cable protection conduits on the market: 16 mm, 22 mm, 28 mm, 34 mm, and 68 mm.

### Available sizes

- 50 mm
- 75 mm
